Old Westminster Pike Bridge 3
Between 1020 & 1030 Old Westminster Pike

c. 1800-1899

Summary:

Bridge 3 on the Old Westminster Pike is typical of the small stone bridges built on turnpikes in the nineteenth century in Carroll County to cross small streams and gullies that only periodically carry rainwater runoff. The earliest bridges were of wood, but they required constant maintenance and periodic replacement, so most turnpike companies systematically switched to masonry structures such as this. Its survival is indicative of the success of this switch. The date of construction for this bridge is not known, and its traditional design is almost impossible to narrow down to a fifty year range, but it is likely that the bridge was constructed in the last half of the nineteenth century. Despite the success of the stone bridges, the turnpikes did not survive, being taken over by the State of Maryland in the 1910's.

Contributing Resources: 1

Bridge 3 is located on the Old Westminster Pike, just south of 1020 Old Westminster Pike and just north of 1032 Old Westminster Pike, approximately two and three-quarters miles southeast of Westminster in central Carroll County, Maryland. The north abutment retains its stone arched opening, but the wall has been replaced by gabion. The south abutment is 30', 10" long by 2' wide and 1', 8" high above the road. It is approximately 9' high above the ground on the south side. The ground slopes down to the south and is dry beneath the bridge. There is a segmentally-arched opening in the south abutment that is 3', 1" high and about 3' wide with straight sides.
